I sent an invite for what looked like first available for the three of us.

I have put all the SJRRP into the template. The results are not what I Thought they would be for the lower stretches of that first reach below Friant so I need to burn some time triple checking all my formulas. Will send around when I feel more confident in all my results.

I took a stab at organizing the section on adding waters for temperature. Can we talk later today to figure out how we get to done?
